INTERPRETATION : Screen Negative

	Screening Risk	Age Related Risk	Risk Cutoff
Down Syndrome	1:10,000	1:770	1:220
Trisomy 18	1:10,000	1:2,700	1:100

FirstScreen will detect approximately 83% of Down Syndrome and 80% of Trisomy 18 fetuses in a singleton pregnancy. This test does not reliably detect other chromosomal abnormalities.

Risk assessment for open neural tube defects (ONTD) is not available in the first trimester.

Maternal screening has some level of inherent false negative and false positive results and is not a substitute for diagnostic testing. It remains standard of care to offer prenatal diagnosis to women age 35 or older at term.

Please check the patient information used in this risk assessment and call with any corrections.
